

ANVIL LIABILITY WAIVER 13-K

ACME accepts no responsibility for gravity. (You know how to sign.)

WHEREAS the undersigned wishes to acquire, deploy, and/or stand directly beneath one (1) or more genuine ACME-brand anvils (the "Anvil"), and

WHEREAS the Anvil is engineered to a single, uncompromising specification — namely, to be extremely heavy and to travel reliably downward, and

WHEREAS the laws of physics are not manufactured, distributed, or warranted by ACME and are hereby expressly excluded from this and all other terms,

NOW THEREFORE the undersigned, by signing through kysigned as set out below, acknowledge and accept the following terms:

1. The Anvil shall go down, not up.
2. ACME is not liable for any coyote, customer, or passing party located at the terminal point of the Anvil's descent.
3. "Look up" constitutes the entirety of the safety training provided.
4. The signing of this document is itself a successful test of the kysigned signing flow, which is the real purpose here.

The undersigned further acknowledge that this document is a TEST FIXTURE from the kysigned public repository, is NOT legally binding, and carries the legal weight of a polite suggestion scrawled on a napkin.

EXECUTION

IN WITNESS WHEREOF, the parties execute this waiver by electronic mail rather than by hand. There are no signature lines, and none are required.

Each party signs from their own email address by replying to the kysigned message that delivered this document with the words "I sign this document." That reply, authenticated by the DKIM signature its sending domain attaches, is the party's binding electronic signature — the signature lives in the email, not on this page.

kysigned seals every signature, the exact document signed, and an independent timestamp into an evidence bundle that anyone may verify without trusting ACME, the signer, or kysigned. By so replying, each party adopts their email as their signature, intends to be bound to the same extent as a handwritten signature, and accepts all gravitational outcomes as final.
